### **Brucellosis update**

During the week of February 14, 2011, Wyoming Livestock Board and USDA APHIS personnel completed testing in a cattle herd in Park County that was recently implicated as the source for a brucellosis serological test reactor. A total of 567 adult cattle were tested revealing 4 additional test reactors. Plans are now being made to remove these reactors from the herd for further bacteriological testing, and additional epidemiology has started related to these new findings.

For further questions or information, please contact Dr. Jim Logan, Wyoming State Veterinarian at (307) 857-4140 or Dr. Bob Meyer, Wyoming Assistant State Veterinarian at (307) 777-6440.
